## **DETAILED ACTION**

## **Election / Restriction**

Restriction to one of the following invention is required under 35 U.S.C. 121

GROUP I Claims 1-3, 7-9, 13-16 and 19-22 drawn to:

As per claim 1:

An encoding device for encoding a plurality of pieces of position information corresponding to a plurality of leaves and/or nodes at the same layer in a tree structure, comprising: rearranging means for rearranging, in accordance with a predetermined order relationship, the plurality of pieces of position information to be encoded, determining means for determining, in accordance with the predetermined order relationship, a branch layer of two consecutive pieces of position information from among the plurality of pieces of position information output from the rearranging means, and encoding means for outputting a code corresponding to the branch layer (as in claim 1 and claims 2,3,7-9,13-16 and 19-22) are also classified in 714/702.

GROUP II Claims 4-6, 10-12, 17,18,23-28 drawn to:

As per claim 4:

An encoding device for encoding a plurality of pieces of position information corresponding to a plurality of leaves and/or nodes at the

Application/Control Number: 10/543,005

Art Unit: 2112

same layer in a tree structure, comprising incremental width determining means for determining an incremental width of the Value of the position information based on the plurality of pieces of position information to be encoded, incremental width encoding means for encoding the incremental width and outputting the encoded incremental width, determining means for determining a branch layer of two consecutive pieces of position information from among the plurality of pieces of position information to be encoded, and branch layer encoding means for outputting a code corresponding to the branch layer (as in claim 4 and claims 5,6,10-12,17,18 and 23-28) classified in 714/752.

The invention are distinct, each from the other because of the following reasons:

Invention GROUP I and GROUP II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instance case, invention GROUP I has separate utility separate utility such as an encoding means comprising rearranging means for rearranging, in accordance with a predetermined order relationship, the plurality of pieces of position information to be encoded, determining means for determining, in accordance with the predetermined order relationship.

In the instant case, the invention of GROUP II has separate utility such as an incremental width determining means for determining an incremental width of the Value of the position information based on the plurality of pieces of position information to be

Application/Control Number: 10/543,005

Art Unit: 2112

encoded, incremental width encoding means for encoding the incremental width and outputting the encoded incremental width. See MPEP 806.05(d).

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of an invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of

Art Unit: 2112

election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the specification. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Esaw T. Abraham whose telephone number is (571) 272-3812. The examiner can normally be reached on M-F 8am-4PM.

Art Unit: 2112

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques can be reached on (571) 272-6962. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
